

SAKIRAN K

8099051949 | saikiran.kuricheti3@gmail.com | Hyderabad, Telangana.

Summary

10+ years of total IT experience including more than 5 years in cloud environment designing, implementing and managing GCP environments. Demonstrates a strong proficiency in cloud architecture, infrastructure as code, onboarding applications on marketplace and automation. Also experience in configuring and managing VMWare Infrastructure, Hyper-converged storage QA, and Test Automation & Container Orchestration.

Skills

Cloud Technologies: GCP (Google Cloud Services), AWS (Amazon Web Services).

Infrastructure as Code: Terraform.

Package Manager: Helm.

CI/CD Tools: Jenkins.

Containerization: Docker, Kubernetes.

Scripting Language: Bash, Python.

Monitoring Tools: Stackdriver.

Version Control: Git, GitHub, GitLab.

SAST & DAST: SonarQube, Netsparker.

Experience

Mphasis | Hyderabad, Telangana

Delivery Project Lead | 09/2024 - Present

Project: Banking

Roles & Responsibilities:

- Architected and provisioned Google Cloud Platform (GCP) VPC networks and subnetworks using Terraform (IaC), implementing CIDR planning, regional subnet design, network segmentation, and best-practice cloud networking standards.
- Built Python automation scripts leveraging GCP APIs to identify unused VPC subnetworks, enabling network optimization, cost reduction, and governance, and integrated with JIRA REST APIs to automatically generate infrastructure cleanup and remediation tickets.
- Executed Terraform workspace and state migration across multiple Terraform Cloud/Enterprise organizations, handling remote state backends, workspace refactoring, IAM permissions, and state locking with zero service disruption.
- Implemented end-to-end observability for GCP VPCs and subnetworks using Terraform, enabling VPC Flow Logs, Cloud Logging, Cloud Monitoring, metrics, and alerts to improve network visibility, security auditing, and operational reliability.

Searce | Hyderabad, Telangana

Senior Cloud Engineer | 08/2022 - 08/2024

Project: GCP Marketplace

Roles & Responsibilities:

- Led the architecture, development, and deployment of multiple SaaS and Kubernetes-based solutions successfully published on the Google Cloud Marketplace, ensuring compliance with

GCP Marketplace onboarding and billing requirements.

- Designed and implemented GCP Marketplace SaaS listings using Python and Flask, delivering a secure, scalable, and user-friendly onboarding and subscription experience.
- Built and maintained RESTful APIs for SaaS product administration, including tenant management, subscription lifecycle handling, and operational workflows aligned with marketplace standards.
- Integrated SaaS platforms with Google Cloud services such as Cloud Run, App Engine, Datastore, and Pub/Sub to enable auto-scaling, high availability, data persistence, and event-driven messaging.
- Implemented a custom email notification and alerting module to notify users of subscription events, provisioning updates, and billing-related actions.
- Developed and executed unit tests and integration tests to validate usage-based billing metrics, ensuring accuracy, reliability, and compliance with GCP Marketplace billing and metering requirements.
- Integrated SaaS applications with Google Cloud APIs to enable automated user provisioning, entitlement management, and billing workflows, supporting seamless customer onboarding and lifecycle management.

Project: Nansen

Roles & Responsibilities:

- Assessed and inventoried existing AWS and Google Cloud Platform (GCP) infrastructure to identify resources suitable for Terraform Infrastructure as Code (IaC) adoption.
- Executed Terraform import operations to bring existing cloud resources under Terraform management, and developed automation scripts to streamline bulk imports across multiple environments (dev, staging, prod).
- Ensured accurate resource-to-configuration mapping between imported cloud resources and Terraform configuration files, maintaining consistency and preventing configuration drift.
- Updated and validated Terraform state files to accurately reflect imported resources, attributes, and dependencies, ensuring reliable state management and future scalability.
- Enabled continuous infrastructure automation and change management by standardizing imported resources within Terraform modules and reusable configurations.
- Verified and enforced IAM roles, access controls, and least-privilege permissions prior to importing sensitive resources, ensuring compliance with security and governance standards.
- Followed cloud security best practices throughout the Terraform import process, including state security, backend protection, and audit readiness across AWS and GCP environments.

Project: Polygon

Roles & Responsibilities:

- Design the network architecture, including VPC, subnets, firewall rules, and VPN/Interconnect configurations.
- Design, implement, and maintain Terraform scripts for infrastructure setup.
- Convert ECS deployments to Helm charts and manage their deployments via terraform. • Securely manage secrets and environment variables.
- Implement and configure ingress-nginx load balancer.
- Use tools like GCP Secret Manager and ConfigMaps to manage sensitive data and configuration. • Configure Datadog for a few of the micro services in the GKE.

Project: Kumu Penlab

Roles & Responsibilities:

- Planned and executed the migration of a containerized application and PostgreSQL database from an AWS environment to Google Cloud Platform (GCP).
- Successfully migrated the containerized application from AWS ECS to GCP Cloud Run, ensuring smooth operation and scalability.
- Managed the migration of the PostgreSQL database from AWS to Cloud SQL for PostgreSQL, maintaining data integrity and access controls.
- Configured a Cloud Load Balancing instance to distribute traffic efficiently across Cloud Run instances for the migrated application.
- Securely migrated secrets and environment variables using GCP Secret Manager, ensuring secure access for the application.

Accenture | Hyderabad, Telangana

Digital Tech Developer Sr. Analyst | 01/2021 - 08/2022

Project: Highmark

Roles and Responsibilities:

- Worked on data ingestion pipelines in different stages implementing data transformation rules. • Creating, Scheduling and triggering jobs in databricks environment using airflow dags. • Implementation of new database and data ingestion in different data stages using parquet files in the GCP environment.
- Analyzing the data patterns and developing the pyspark scripts to flatten the data in different stages. Modified the existing data pipeline modules based on the source data and requirements.

Vedams Software Solutions | Hyderabad, Telangana

Senior Systems Engineer | 03/2015 - 01/2021

Project: Biarca-Patrol

Roles & Responsibilities:

- Worked on Google Cloud Platform (GCP) services like Compute Engine, Cloud Storage, Cloud SQL, StackDriver Monitoring, GKE Clusters.
- Created GKE Cluster, service accounts, Cloud SQL, Cloud Storage (buckets), VPC network for different environments QA and prod using Terraform.
- Worked on Jenkins file for Branch Checkout, Build Images and push the image into GCR. • Developed an event-based scan feature and version control for custom compliance rules for the application. Develop, test, implement and maintain the application.
- Implementing new features on the product.
- Hands-on experience with GCP resources like GKE, networking, GCS, Cloud SQL, IAM & Service Accounts. Configure, Release & Maintain the Containerized application on Kubernetes (GKE) in the GCP marketplace. Automating the application infrastructure creation like Cloud SQL, GKE Cluster, IAM custom roles, etc using terraform. Performing RCA and Fixing bugs. • Maintaining the CI pipeline for component builds.
- Basic knowledge of tools such as SonarQube for vulnerability detection.

Technologies Used: Python, Terraform, Jenkins, Django Framework, GIT, Docker, Kubernetes (GKE).

Project: HCS (Maxta)

Roles & Responsibilities:

- Automation of Test cases for VMWare and Hyper Converged application using python. • Developed a containerized flask application for managing test case operations using UI. • Automated the testbed creation in a VMWare environment such as VM Creation / Deletion, deploy templates, Creating and managing Clusters.
- Hands-on experience with RAID Level 5 and 10, NAS.
- Extensively worked with VMware ESXi 5.5/6.0/6.5, vCenter, Host Clustering with HA, vMotion & svMotion. Responsible for VMWare lab environments (ESXi, vCenter) such as Installing, Configuring, Managing, and Up-gradation.

Technologies Used: vCenter, vSphere Client, python, git, docker.

Project: LFCE & LFCSA(Linux Foundation)

Roles & Responsibilities:

- Developing scripts to provide dependencies related to the environment for each question. • Developing scripts to validate the exam after a candidate has taken the exam. • Developing bash scripts to test the environment for each question and its answer. • Developing exam scripts using Python and Bash scripting.

Technologies Used: Python, Bash, git.

Project: IT in a BOX

Roles & Responsibilities:

- Automation and configuration of NFS, DNS, DHCP, Samba, Nagios and apache using bash script according to distros like ubuntu and redhat.
- Hands-on administration of Linux/UNIX distros (RedHat/CentOS, Ubuntu).
- Experience in administration, maintaining and troubleshooting various Server products (HP, Dell R610, R630 and Super Micro) and their functionalities.

Technologies Used: BASH, git, Ansible.

Education

JNTU | Hyderabad, Telangana

B.Tech (Computer Science and Engineering) | 06/2013

Certifications

- GCP Professional Cloud Architect Certified [CID: [0c928c8b4c0c48789503e090f1bf4ee9](#)] • GCP Associate Cloud Engineer [CID: [d82d618d0f254d5bbf6334046e393198](#)] • AWS Certified Cloud Practitioner
- Hashicorp Certified: Terraform Associate(003) [CID: [b4497ae3-f3db-4e31-b774-8b1492863cfe](#)] • Red Hat Certified Engineer (v6) [CID: 130142805],
- Red Hat Certified System Administrator (v7) [CID: 130142805]
